

Sustainable practices

Protect to
perform.

Progress

It is not just since the start of the current energy crisis that we have concerned ourselves with the topics of energy and sustainability. On the contrary: Investment in **sustainable and efficient technology for preserving resources** has long been an integral part of our strategic operation.

We have been committed to reducing our CO₂ emissions continually for many years. As a participant in the Energy Agency of the Swiss Private Sector, we have had a positive impact on the successful drive to achieve climate protection goals. Our **Silver Status** accreditation from ecovadis underlines this commitment in many areas, including 'Environment' and 'Sustainable Procurement'.

Reduction

We have reduced our electricity usage by **8%** since Jan 1, 2022, alone:

- **5.5% of this from hidden electricity usage**
(e.g. optimization in the compressed air network and Hvac system)
- **2.5% from visible / tangible elements:**
 - Light boxes in the customer area
 - Lighting in the corridors and various facilities
 - Lighting of the frontage and logo
 - LED lamps used for all lighting

Further measures to follow.

By Dec 31, 2022, we will have reduced our electricity usage by at least **15%**.

Infrastructure

Regenerative thermal oxidation (RTO*), heat recovery via RTO in our production facilities and, more generally, long-term investment in state-of-the-art infrastructure mean that we have been able to reduce our gas usage since Jan 1, 2022, and what's more, by:

30%

Due to the current circumstances surrounding Europe's energy supplies, we are adopting yet further measures.

*Waste gas control process, favored method for reducing hydrocarbon emissions.

Focus

When replacing existing equipment or developing remodeling plans, we take all aspects into account.

- Optimum utilization of our machinery and facilities
 - Environmentally-friendly materials
 - More efficient production facilities
 - Low emissions
 - Eco-friendly waste disposal/recycling
 - Economical use of materials
 - Repair and maintenance expenditure
-

Protect to perform

We remain committed to:

- Continually reducing our CO₂ emissions
- Sustainable procurement
- Reducing our gas and electricity usage

Protect to perform

Thank you for your support!
